Do you recive an immunisation card	?	
☐ Yes ☐ No		

#### Action Contre la Faim - MAUNGDAUW / BUTHIDAUNG - Mars 2000

## **STEPS FOR KAP SURVEY**

1/ Introduce yourself to the chairman

2/ Explain the purpose of the survey and explain that you need to interview women in 7 households which should take approximately two and half hours.

3/ Ask to the chairman to take you in the centre of the village. If he wants that one of his representant follow you during interview, try to explain why it would be easier without him. If he insists, agree but try that this person doesn't speak during the interview.

4/In order to choose the direction of your survey, spin your pen on the ground. You're direction the neck of the pen points in.

5/ Count the number of houses that are in the designed direction until you reach the periphery of the village.

6/ In order to identify the house with which you will begin your survey, use the hazard number chart. Looking away from the table, let your pen drop on the table. Take the first number of the number your pen has dropped on. If the number is to large (not so many houses in this direction), then read the next number to it's right until you fall on a number whose first digit form a number that are within your count of houses. This is the house with which you will begin your survey. Household n°1. You will interview the wife who is responsible for the household chores concerning water and hygien.

7/ Complete the questionnaire in household n°1 and then to continue to the next house. The second house the onewhose door is closest that the last house you visited. Then continue until you reach 7 household. If in one house the women is not here or she refuses to answer to the interview, go to the next house (the closest door where you are).

\*\* If you reach the end of the village before you have been able to interview 7 household, then you must go back to the center of the village and spin the pen again (repeat steps 4 to 7).

### REMEMBER

When you translate the question into local language, it is essential that you translate it without indicating the answer. Do not give the woman an indication of the answer - let her answer what she feels the question is asking her. At this point, we do not want to correct the woman in her response. If you think she hasn't understood the question, try to ask her in another way, but don't give the response in your answer! Just write the answer that she has given. The answers options are provided for you only - do not list the choices to the woman!

Do not hurry the woman in her answers!
